

RGA12

KERNMANTLE ROPE GRAB

The RGA12 is designed to provide vertical fall protection to operatives ascending/descending a ladder or structure. This version of the rope grab is for use with 11mm kernmantle rope only.

In use, the RGA12 should be connected directly to the chest attachment of a compatible harness via a karabiner. This ensures that the operative is held close to the structure and in the event of a slip, the fall distance and loading on the top anchor and user is minimal. Additional fall protection should be used to protect the user when detaching from the device at height.

Accredited to: EN 353-2:2002

Material: Stainless steel body with alloy cam

Weight: 320g

Max force: <6kN (with compatible rope e.g. RGRO11)

Safety lock

Detachable from rope
